

HELP THE EVESHAM MUA IN OUR LEAD AND COPPER SAMPLING!

The Evesham MUA (EMUA) is looking for residents to help collect lead and copper samples. The EMUA is required by the New Jersey Department of Environmental Protection (NJDEP) to perform lead and copper sampling on a routine basis. As part of our lead and copper sampling program, we test the water at specific homes based on the service line materials and year of home construction. If eligible, the EMUA will deliver a water sample kit with instructions to your home for you to collect a sample at your convenience. No water can be used in the home for at least 6 hours prior to taking the water sample and once collected, we'll pick up your water sample from your home. We will also share your results with you!

Homes that meet the following criteria are eligible:

- Single family homes or multi-family buildings with a verified lead service line or galvanized service line
- Single family homes or multi-family buildings with copper pipes with lead solder that were installed before 1987.

Properties that have in-house water treatment, such as a water softener or a whole-house filter, would not qualify to participate. In addition, samples cannot be taken at taps with a point-of-use filter.

If you are willing to help, please contact Kaitlyn Kropa at (856) 983-0331 Ext. 210, to find out if your home is eligible for this testing program.
