

# IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

## Monitoring and Reporting Requirements not met for Evesham MUA

Evesham water system violated drinking water requirements over the past year. Even though it is not an emergency, as our customers, you have a right to know what happened and what is being done to correct the situation.

The EMUA is required to monitor your drinking water for specific contaminants on a regular basis.

Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During 2025, we did not complete the required monitoring for PFAS and nitrate at one of our 9 Treatment Points (because the Well was Out of Service) and therefore cannot be sure of the quality of your drinking water from that site during that time. **Please see detailed explanation below.**

The EMUA water system is required to collect annual samples from all 9 Treatment Points for Perfluorononanoic acid (PFNA), Perfluorooctane Sulfonic Acid (PFOS), Perfluorooctanoic Acid (PFOA), and nitrate. The EMUA collected these required annual samples from all Treatment Points in 2025 except for Well #8 (TP006019). Well #8 ran shortly for 22 days in January 2025, before experiencing catastrophic failure. Well #8 was deemed out of service (OOS) and the Well did not run for the remainder of 2025. Because the Well only ran for a short time in 2025, the required annual PFAS and nitrate samples were not collected as the EMUA did not expect catastrophic well failure in the early weeks of the year; the EMUA expected to have the entirety of the year to collect these required samples. The Well does not have any history of PFAS or nitrate detections and they were not detected when the MUA last tested them in 2024. The EMUA will collect these samples when the Well comes back online, which is anticipated to be at the end of 2026 or early 2027.

### What should I do?

There is nothing you need to do!

However, if you have specific health concerns, a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at higher risk than other individuals and should seek advice from your health care providers about drinking this water.

### What is being done?

Customers are not required to take any action and there are no adverse health risks. The Well does not have any history of any PFAS or nitrate detections and there were no detections when we tested it in 2024. The MUA does not anticipate this Well being back online until the end of 2026 or early 2027 and will test for these compounds when the Well comes back online.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

For more information, please contact Kaitlyn Kropa at 856-983-0331. Information on our water system, including drinking water results, may be found on the New Jersey Department of Environmental Protection's Drinking Water Viewer website available at <https://waterviewer.nj.gov/>.
